Selected Skills & Interests

- Free/libre and open-source software development
- Package management systems and build systems
- GNU/Linux software development, Rust, C, C++
- Full-stack web development, React, TypeScript, Go
- Nix and NixOS
- Leading geographically-distributed teams
- Documentation, technical writing
- Cryptography, security, reverse engineering
- Teaching

Work Experience

Red Hat, Inc., Senior Software Engineer (2025–), Software Engineer (2023–2025) Atlanta, GA, 2023–

Technical lead of the 8-developer DNF team since 2025. Building DNF5, a new package manager written in C++20 and a core component of Fedora Linux. Implemented major features of DNF5 including `system-upgrade`, `needs-restarting`, and `manifest`. Authored system-wide change proposals for Fedora. Coordinated cross-team efforts to replace DNF 4 with DNF5 in RHEL 11. Conducted panel interviews and mentored newer team members.

G.T. College of Computing, Teaching Assistant Atlanta, GA, 2019–2022

Teaching assistant for six semesters of CS 3451: Introduction to Computer Graphics. Held busy office hours twice a week, debugged and graded programming homework. Worked with Greg Turk, Blair MacIntyre, and Jarek Rossignac.

Decatur Makers, Digital Infrastructure Intern Atlanta, GA, Summer 2021

Developed an RFID authentication system to allow members access to the makerspace. Automated time-consuming steps in the process for signing up new members, such as requesting background checks.

Red Hat, Inc., Software Engineering Internship Boston, MA, Summer 2019

Added a new feature to Lorax (at the time a component of RHEL Image Builder) to enable uploads of RHEL images to cloud providers including AWS, Microsoft Azure, and Google Cloud.

Axio Global, Development Intern Atlanta, GA, Summer 2018

Launched a React+GraphQL+Express web platform to facilitate communication between clients and in-house analysts, created tools for visualizing insurance policy coverage.

G.T. School of Mathematics, Student Assistant Atlanta, GA, Summer 2016, Summer 2017

Developed in-house infrastructure for managing RHEL and macOS systems, monitoring building power usage and coolant flow, and syncing user permissions across services.

Talks

Local package layering on bootc systems with DNF5 — DevConf.CZ 2026

Modernize your package manager: introducing DNF5 and declarative package management with manifests — Red Hat Summit Community Day 2026

Learning from Nix: how other package managers can do better — DevConf.CZ 2024

Education

Georgia Institute of Technology, M.S. Computer Science Atlanta, GA, 2021–2022

Specialization in Computing Systems.

Selected coursework: Advanced Topics in Malware Analysis, High Performance Parallel Computing, Applied Cryptography, Programming Languages

Georgia Institute of Technology, B.S. Computer Science Atlanta, GA, 2017–2021

Specializations in Artificial Intelligence and Media.

Selected coursework: Automata & Complexity, Machine Learning, Computer Vision, Computer Graphics, Computer Audio
